SUMMARY

5th-semester **Software Engineering** student at **NUST** (CGPA: **3.76/4.00**) with hands-on full-stack experience shipping and operating a **production e-commerce platform** end to end. Skilled in **Node.js**, **Express.js**, **Next.js**, **React.js**, **MongoDB**, **MySQL**, **JWT**, **Java**, and **REST API** design. Founder & Full-Stack Developer of **Viro.pk** — independently designed, built, deployed, and continue to maintain and scale the platform. Seeking a **Software Engineering internship** to bring real production experience to a growing engineering team.

PROJECTS

Viro.pk — Founder & Full-Stack Developer

Ongoing

Next.js • React • Supabase • Tailwind CSS • PWA | viro.pk

- Independently designed, developed, and deployed a **production e-commerce platform** (fashion accessories) as a full-featured **PWA**, iterated through 40+ versions from initial build to current release.
- Built an **admin panel** with order management, analytics dashboard, wishlist, and dark/light theming; integrated **WhatsApp** ordering and **Cash-on-Delivery** checkout flow.
- Engineered secure order-to-stock logic (stock decrements on confirmation, restores on cancellation) and hardened auth with **SHA-256** password hashing.
- Own end-to-end growth: run and optimize **Meta Ads** campaigns (pixel tracking, audience targeting, budget structuring) driving real customer acquisition for the business.

OS Kernel Simulator — CEP Semester Project (CS-330: Operating Systems)

Mar 2026 – May 2026

Node.js • Express • MongoDB Atlas • JWT • bcrypt • Helmet • Multer • MVC • Railway • Vercel | [GitHub](#)

- Built and deployed a full-stack web app simulating OS algorithms — CPU scheduling (FCFS, SJF, Round Robin, Priority), memory page replacement (FIFO, LRU, Optimal), and process synchronisation.
- Designed a structured **MVC REST API** with 15+ endpoints, secured with **JWT** authentication, **bcrypt** password hashing, **Helmet**, **CORS**, and rate limiting.
- Tested all endpoints with **Postman**; implemented **CSV upload** via Multer, paginated simulation history, and centralised error handling.
- Built the **React** frontend (functional components, useState, Context API for auth state) with Gantt chart visualisation and protected routes; deployed backend on **Railway**, frontend on **Vercel**.

AeroSys — Airline Management System (Fiverr Client Project)

Mar 1 – Mar 14, 2026

Java • OOP • Swing GUI • JDBC • MySQL • Stored Procedures • DAO Pattern • MVC | [GitHub](#)

- Delivered a complete airline management desktop app to a paying **Fiverr** client within a strict 14-day deadline, independently managing the full development cycle.
- Implemented role-based access (Admin, Employee, Passenger) with a stored-procedure-backed login flow — AuthDAO → sp_login → SessionManager.
- Built 7 **DAO** modules covering flights, bookings, payments, and ticketing on a relational **MySQL** schema with full referential integrity, plus a polished **Swing** UI with boarding-pass/ticket printers and flight-report generation.

EDUCATION

National University of Sciences and Technology (NUST)

Sep 2024 – Jun 2028

B.S. Software Engineering | CGPA: **3.76 / 4.00**

Relevant Coursework: Programming Fundamentals • OOP • DSA • Computer Networks • Computer Architecture • Operating Systems • Software Design & Architecture • Design & Analysis of Algorithms

Punjab College, Burewala — F.Sc. Pre-Engineering

Jan 2022 – Jan 2024

Marks: 1083 / 1200

TECHNICAL SKILLS

Backend: Node.js, Express.js, REST API Design, JWT, bcrypt, Helmet, Multer, MVC, Rate Limiting, Pagination

Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS

Languages: JavaScript (ES6+), Java (OOP, Swing), Python, C++

Databases: MySQL, MongoDB Atlas, Supabase, JDBC, Stored Procedures

Tools & Platforms: Git/GitHub, Postman, VS Code, IntelliJ IDEA, Railway, Vercel, XAMPP, Launch4j

LANGUAGES

English (Conv) • Urdu (Native) • Punjabi (Conversational)
